開放式課程

《經濟學原理》

第三十八講

總合需求與供給 (上) (Ch.33)

授課教師：國立臺灣大學經濟學系 林明仁教授

授課大綱整理：國立臺灣大學 開放式課程

【本著作除另有註明外，採取創用 CC「姓名標示—非商業性—相同方式分享」臺灣 3.0 版授權釋出】

※本課程指定教材為 N. Gregory Mankiw: Principles of Economics (2012), 6th edition.

總合需求與供給 AD & AS (Aggregate Demand and Aggregate Supply)

● 短期經濟波動 (Short-Run Economic Fluctuations)

- Recession (經濟衰退)
- Depression (經濟蕭條)

影響經濟波動因素

1. Irregular and unpredictable

2. Variables fluctuate together

3. Unemployment rises

解釋短期經濟波動

- 古典經濟學的假設
 - Keynes: in the long run, we are all dead!
 - Sticky price, wage rigidity, 價格僵固性
- The Model of AD & AS

- aggregate-demand curve (總和需求曲線)
- aggregate-supply curve (總和供給曲線)

總和需求曲線

● 為何斜率為負？

- $Y = C + I + G + NX$
- 物價水準和消費 (財富效果)
- 物價水準和投資 (利率效果)
- 物價水準和淨出口 (匯率效果)

● 為何 AD 曲線移動？

- 影響因素：消費、投資、政府採購、淨出口

- 任一因素改變都會造成移動

● Summary

Why Does the Aggregate-Demand Curve Slope Downward?

1. *The Wealth Effect:* A lower price level increases real wealth, which encourages spending on consumption.
2. *The Interest-Rate Effect:* A lower price level reduces the interest rate, which encourages spending on investment.
3. *The Exchange-Rate Effect:* A lower price level causes the real exchange rate to depreciate, which encourages spending on net exports.

Why Might the Aggregate-Demand Curve Shift?

1. *Shifts Arising from Consumption:* An event that makes consumers spend more at a given price level (a tax cut, a stock-market boom) shifts the aggregate-demand curve to the right. An event that makes consumers spend less at a given price level (a tax hike, a stock-market decline) shifts the aggregate-demand curve to the left.
2. *Shifts Arising from Investment:* An event that makes firms invest more at a given price level (optimism about the future, a fall in interest rates due to an increase in the money supply) shifts the aggregate-demand curve to the right. An event that makes firms invest less at a given price level (pessimism about the future, a rise in interest rates due to a decrease in the money supply) shifts the aggregate-demand curve to the left.
3. *Shifts Arising from Government Purchases:* An increase in government purchases of goods and services (greater spending on defense or highway construction) shifts the aggregate-demand curve to the right. A decrease in government purchases on goods and services (a cutback in defense or highway spending) shifts the aggregate-demand curve to the left.
4. *Shifts Arising from Net Exports:* An event that raises spending on net exports at a given price level (a boom overseas, speculation that causes an exchange-rate depreciation) shifts the aggregate-demand curve to the right. An event that reduces spending on net exports at a given price level (a recession overseas, speculation that causes an exchange-rate appreciation) shifts the aggregate-demand curve to the left.

總和供給曲線

- 長期看來，總合供給曲線是一條垂直線

- 影響因素：勞動力、資本、天然資源、科技知識

- 為何 AS 曲線會移動?

● 長期經濟成長與物價上漲

5	Why Does the Aggregate-Demand Curve Slope Downward? 1. The Wealth Effect: A lower price level increases real wealth, which encourages spending on consumption. 2. The Interest Rate Effect: A lower price level reduces the interest rate, which encourages spending on investment. 3. The Exchange Rate Effect: A lower price level causes the real exchange rate to depreciate, which encourages spending on net exports. Why Might the Aggregate-Demand Curve Shift? 1. Shifts Arising from Consumption: An event that makes consumers spend more at a given price level is far cut, a stock-market boom shifts the aggregate-demand curve to the right. An event that makes consumers spend less at a given price level is a tax hike, a stock-market decline shifts the aggregate-demand curve to the left. 2. Shifts Arising from Investment: An event that makes firms invest more at a given price level (optimism about the future, a fall in interest rates due to an increase in the money supply) shifts the aggregate-demand curve to the right. An event that makes firms invest less at a given price level (pessimism about the future, a rise in interest rates due to a decrease in the money supply) shifts the aggregate-demand curve to the left. 3. Shifts Arising from Government Purchases: An increase in government purchases of goods and services (greater spending on defense or highway construction) shifts the aggregate-demand curve to the right. A decrease in government purchases on goods and services (a cutback in defense or highway spending) shifts the aggregate-demand curve to the left. 4. Shifts Arising from Net Exports: An event that raises spending on net exports at a given price level is lower overseas speculation that causes an exchange rate depreciation shifts the aggregate-demand curve to the right. An event that reduces spending on net exports at a given price level (a recession overseas, speculation that causes an exchange rate appreciation) shifts the aggregate-demand curve to the left.		引用自 N.
